Peter Lord, Director
Island Astronomy Institute
P.O. Box 249
Bernard, ME 04612

June 29, 2007

Dear Mr. Lord and Island Astronomy:

I want to offer my most sincere appreciation to you for bringing STARLAB to Tremont Consolidated School! As you could tell from the enthusiastic response that you received, all of our students—from our kindergarteners to our 8th graders—were overwhelmingly enthused with the program and with “being there” in space, whether it was flying by the moon, visiting Saturn, or looking at distant galaxies. If one of the goals of education is to stimulate the imagination of our students, STARLAB can certainly do that.

If STARLAB were available for our use during units of study on the solar system and universe, I could imagine that it would be a huge asset for our students. STARLAB would allow our students “go” to the places that they study and to see places and events that verge on the incredible. It would be an invaluable teaching tool, with teachers being able to tailor the interactive presentations to the needs of a particular group of students.

I wish you well in soliciting funds for purchasing the next generation of STARLAB; I know it will be an asset to students and schools all over eastern Maine.

Sincerely,

Dianne Waters
